## TECHNICAL PRODUCT BULLETIN

---

The text 'HAN-SAN' is written in a bold, white, sans-serif font and is centered within a solid blue rectangular box.

### **Description**

HAN-SAN is a hand sanitizer that helps to reduce bacteria that potentially can cause disease. The product consists of 60% concentration (by weight) of ethyl alcohol designed for hand sanitizing. The product's strength and formulation meet the requirements for hand sanitizers, as approved by the Centers for Disease Control and Prevention (CDC).

HAN-SAN is made with a thickener to produce a pleasant, mildly viscous consistency for practical application.

### **Directions**

HAN-SAN can be applied to hands via a gallon pump dispenser, pump sprayer, or poured directly from the container. Do not dilute this product. Vigorously rub a nickel to a quarter-sized amount of product into the skin with both hands, taking care to cover all hand surfaces, with particular attention paid to cuticles and under nails.

### **Packaging**

HAN-SAN is available in 4x1-gallon cases and 15-gallon containers.

### **Caution**

HAN-SAN contains alcohol and is flammable. Use extreme care to ensure the product is not used or stored near open flames, high heat, or areas where sparks may occur.

NOTE: HAN-SAN has been designed for topical use only.
