
TECHNICAL PRODUCT BULLETIN

The logo for SAN-MAN consists of the words 'SAN-MAN' in a bold, white, sans-serif font, centered within a solid green rectangular background.

Description

SAN-MAN is a hand sanitizer with glycerine that helps to reduce bacteria that potentially can cause disease. The product consists of 70% concentration (by weight) of isopropanol alcohol designed for hand sanitizing. The product's strength and formulation meet the requirements for hand sanitizers, as approved by the Centers for Disease Control and Prevention (CDC).

SAN-MAN is made with a thickener to produce a pleasant, mildly viscous consistency for practical application. It also contains a glycerine adjunct, which is an effective skin protectant (humectant).

Directions

SAN-MAN can be applied to hands via a gallon pump dispenser, pump sprayer, or poured directly from the container. Do not dilute this product. Vigorously rub a nickel to a quarter-sized amount of product into the skin with both hands, taking care to cover all hand surfaces, with particular attention paid to cuticles and under nails.

Packaging

SAN-MAN is available in 4x1-gallon cases.

Caution

SAN-MAN contains alcohol and is flammable. Use extreme care to ensure the product is not used or stored near open flames, high heat, or areas where sparks may occur.

NOTE: SAN-MAN has been designed for topical use only.
