WCS™ Wet-Cleaning Systems

**WET-DETTE****Description**

WET-DETTE represents a breakthrough in wet-cleaning innovation chemistry. WET-DETTE performs on the acid side, preventing dye loss when wet cleaning fabrics historically classified as dry-clean only. Low pH washing also reduces rinsing requirements, which reduces utility usage and labor costs due to shorter formula wash times.

**Applications**

Pariser created WET-DETTE specifically for wet-cleaning machine applications. WET-DETTE has broad usage as a wet-cleaning or laundry detergent due to its compatibility with all fabrics.

**Directions**

- For wet-cleaning machines: 1.0–1.25 ounces per 10 gallons of water
- For conventional washers: 3–4 ounces per 50-pound loads depending upon soil level. (Do not wash and bleach simultaneously.)
- For top loaders: Add according to the following table:

	<b>Light soil</b>	<b>Heavy soil</b>
High water level	2 ounces	4 ounces
Medium water level	1 ounce	3 ounces
Low water level	½ ounce	2 ounces

Note: Clean on gentle cycle for 7 minutes, one rinse, and a short extract. Dry garments to 15% moisture retention for optimum softness.

- For CBW machines, contact your Pariser representative.
- For fabrics such as wool blankets, cotton sweaters, and polo shirts, add HYDROCON or SOFT XL to the final rinse to produce a soft, supple hand.

**Packaging**

WET-DETTE is available in 4x1-gallon cases and 5-, 15-, and 55-gallon drums.
