

Technical Product Bulletin

CHINA-SOAK

CHINA-SOAK is a stable, oxygen bleach-based powdered destainer for plastic, china, and stainless tableware. As a soak product, CHINA-SOAK destains coffee urns. It can also be used for pre-soaking stainless utensils. This product is safer than chlorine, which can often pit and degrade plastic glazing.

Directions

Destaining plastic and china dinnerware: Dissolve two rounded tablespoons of CHINA-SOAK per gallon of water. Keep solution hot, between 140°–160°F. Immerse utensils; let soak until stains are removed. Rinse thoroughly in clear water or run through the dish machine.

Destaining coffee makers: Dissolve two rounded tablespoons of CHINA-SOAK per gallon of hot water. Circulate the solution through the coffee maker until the stains disappear (usually 10 minutes). Flush with clear water.

NOTE: If the coffee maker is made of aluminum, dissolve CHINA-SOAK in another container first. Let the solution settle, then pour only the clear solution into the coffee maker. Undissolved CHINA-SOAK may etch or discolor aluminum.

Destaining tea and coffee dispensers (portable type – thermal): Flush empty container with clear water. Scrub all parts with a solution of CHINA-SOAK (½ to 1 ounce per gallon of hot water). Rinse thoroughly with fresh water and invert to air dry.

Handling

Harmful if swallowed. Avoid contact with skin or eyes. Contains sodium metasilicate – can cause burns.

First Aid

External: Flush with running water, then wash with vinegar.

Internal: Drink large amounts of water, then vinegar or citrus juice. Follow with olive oil.

Eyes: Flush with running water.

GET MEDICAL ATTENTION IMMEDIATELY.

Packaging

CHINA-SOAK is available in 12x2-pound and 4x10-pound cases.
