ECCO-RINSE

ECCO-RINSE is an economical drying and rinse agent that reduces rinse water surface tension, allowing for superior spot-free drying. It performs best when automatically dispensed via injector to the final rinse line. This product works well on silver, flatware, china, glassware, and plastic.

Directions

ECCO-RINSE is the most effective when used in rinse water between 180°–195°F. Lower temperatures inhibit activation of the drying agent, while temperatures above 200°F cause evaporation and clouding. The rinse aid injector is set depending on conditions and desired results; however, 1–2 ounces of ECCO-RINSE is ideal for 100 gallons of rinse water. Consult your local Pariser representative for specific usage procedures.

Handling

ECCO-RINSE is slightly acidic and may be mildly irritating. In case of contact with skin, rinse liberally with water. For eyes, continue flushing and if irritation persists, get medical attention.

Store ECCO-RINSE at room temperature. Avoid freezing.

Packaging

ECCO-RINSE is available in 4x1-gallon cases and 5-gallon containers.
