

Technical Product Bulletin

ENCORE

ENCORE represents the newest innovation in wet-cleaning detergents. This product uses a proprietary surfactant that provides superior soil and oil removal in a controlled sudsing formulation that provides a luxurious feel and finish to the most delicate garments. In addition, ENCORE keeps your dyes from fading and reduces bleeding in mixed loads.

Applications

Pariser created ENCORE specifically for wet-cleaning machine applications. It has broad use for wet cleaning or as a laundry detergent in mixed color loads and is compatible with all fabrics.

Directions

Use 0.4 ounces of ENCORE per gallon of water in wet-cleaning machines or commercial washers. Use up to 0.7 ounces for extra delicates. Fill washers only to a maximum of half-rated capacity for wet cleaning.

Inject ENCORE into the washer before water contacts the garments. Mill the items with appropriate agitation for the durability of garments in the load for 6–9 minutes at a low level, then fill to a medium level and mill for 3–5 minutes before draining and extracting.

When using ENCORE for standard mixed laundry or more durable goods, follow the above format but drain before rinsing.

The optimum water temperature is 80° for the best oil removals.

Packaging

ENCORE is available in 5- and 15-gallon containers.
