

Technical Product Bulletin

HOT SHOT

HOT SHOT is the product of choice for applications requiring a liquid-built detergent. The product is a combination type containing biodegradable synthetic detergents, water conditioners, and alkalinity for a wide range of soil found in hotel/motel and institutional healthcare facilities. The product is phosphate-free, and alkalinity levels are mild in contrast to most built detergents on the market today.

Performance

HOT SHOT is highly soluble. It penetrates fabrics to loosen, emulsify and suspend soil, preventing greying due to re-deposition. The product is safe on all fabrics, although it is best to consult a Pariser representative for proper usage rates.

Advantages

- Enhanced safety to linen and personnel.
- Used as received.
- Requires less rinsing than conventional built detergents.
- Combines alkali and surfactant requirements.
- Effective across a broad range of water hardness conditions.

Directions

Light soil: 2–4 ounces per 50 pounds of wash in the break operation at 150°–160° F.

Medium soil: 4–6 ounces per 50 pounds of wash in the break operation at 150°–160° F.

Handling

HOT SHOT contains alkaline ingredients. Use caution when handling. Do not take it internally. If liquid gets on hands or in eyes, flush with plenty of water for 15–20 minutes. If irritation persists, get medical attention.

Packaging

HOT SHOT is available in 2.5-, 5-, 15-, 30-, and 55-gallon containers.
