

Technical Product Bulletin

HYDROCON

HYDROCON is a fabric conditioner and retexturizing agent formulated for professional wet cleaners to process textiles that require additional drape relaxation and a softer, supple hand. The product reduces static, improves stain resistance, and reduces pressing time.

Applications

In laundry applications, add HYDROCON to the final rinse operation of the formula. In wet-cleaning applications, add to the break or the final rinse. This product also works well on rayon and linen garments, which are difficult to press after aqueous processing.

Directions

- Wet-cleaning applications: Add 2–3 ounces per 10 gallons of water to the rinse cycle.
- Laundry applications (commercial machines): Add 4–6 ounces per hundredweight (cwt) to the final rinse operation.
- Top-loaders: Add 1/2–2 ounces to the final rinse compartment/operation.
- Hand washing: In clear water, add 2 ounces of HYDROCON per gallon of rinse water and mix thoroughly. Allow fabric to soak for 3–5 minutes and mildly agitate. Squeeze out garments (DO NOT WRING) and dry/press according to label instructions.

Note

The HYDROCON formulation is a unique suspension that may likely begin to stratify over time. Generally, this product has a shelf-life of 90–100 days; however, this can be longer or shorter depending upon local environmental conditions such as intense heat or freezing. Do not use the product if it has completely separated.

Packaging

HYDROCON is available in 4 x 1-gallon cases and 5-, 15-, and 55-gallon containers. Best if used within 5 months of packaging date.
