

Technical Product Bulletin

IRON-X

IRON-X is a highly effective, concentrated liquid neutralizing sour for use in the Pariser CLS injection program.

Apply the product directly where the final pH of the linen must be below the range found in the raw water used for rinsing, and for linen treatment where rust or iron matter is prevalent and discoloration is noticeable.

Directions

Use IRON-X at 2–3 ounces per CWT of wash, depending on the pH range and existing iron concentrations.

Use care to maintain a linen pH between 5.5 and 6.5, depending on the classification and finishing procedures.

Routine gross overfeeding is not recommended due to its acidic nature and the potential fiber damage that can occur when used repeatedly in this manner.

Handling

IRON-X is a blend of acids commonly used for souring and rust-removing applications.

Use extreme care when handling. Do not mix IRON-X with any other compounds. The product can cause skin and eye irritation upon contact; if this occurs, rinse the area for 15 minutes with water or a bicarbonate of soda solution.

Packaging

IRON-X is available in 2.5-gallon totes.
