

Technical Product Bulletin

N-BRITE

N-BRITE is a 12.5% active stabilized liquid sodium hypochlorite (chlorine) bleach that removes stains, brightens, and sanitizes. The product is a safe choice for commercial and institutional needs.

Performance

N-BRITE reactivates carryover soap in the bleach cycle, kills bacteria in the wash cycle when used as directed by the Centers for Disease Control and Prevention (CDC), and whitens as it removes stains.

Advantages

- Double action: the product simultaneously bleaches and strips out lime and acid soaps to restore fabrics to sparkling whiteness.
- Infinitely soluble: the product provides a uniform rate of chlorine release for stain removal without adversely affecting tender fabrics.
- Works well in water temperatures as low as 135°F.
- Ideal for automatic feeding equipment that feeds directly from the container.

Directions

Light to medium soil: Use 3–4 ounces per 100 pounds of wash at 135°F–145°F.

Heavy soil: Use 8–10 ounces per 100 pounds of wash at 135°F–145°F.

Rejected stains and mildewed linen: Use 12–13 ounces per 100 pounds of wash at 160°F. Run the bleach bath for at least 15 minutes.

Handling

N-BRITE is slightly alkaline and corrosive. Use standard precautions while handling. Do not take internally. If liquid gets in eyes, flush with plenty of water for 15–20 minutes and get medical attention.

Packaging

N-BRITE is available in 5-, 15-, and 55-gallon containers. Best if used within 2 months of packaging date.
