

Technical Product Bulletin

NAPHTOL-T

NAPHTOL-T is a non-caustic, powdered, mildly built product that contains numerous ingredients for water conditioning and oily stain removal.

Application

Typically, colored shirts must be processed at low temperature without caustic ingredients because of the potential for color loss in the wash. In this milder cleaning environment, commercial operators often find an inordinate number of wash-overs due to oily stains; in some cases, they then send these items to the dry cleaning machine for costly, time-consuming recleaning. NAPHTOL-T is a breakthrough commercial laundry product that effectively washes colored shirts in warm to cool water. The product is also effective on white shirts in high-temperature applications (with a separate bleach).

Directions

Colored shirts: Use 8–12 ounces per 50 pounds (90–100 shirts) load in cool to warm water (80°–110°F).

You can also use the product with separate oxygen bleach. Do not pour powders onto shirts.

White shirts: Use the same dosage at 150°F with bleach adjunct.

Packaging

NAPHTOL-T is available in 50-, 100-, and 400-pound containers.
