

Technical Product Bulletin

PREMIER

PREMIER is an all-purpose built laundry detergent for linen and industrial uniform laundering. Usage of this product includes a stand-alone primary laundry detergent for out-of-service linen reclamation and adjunct stain and soap scum removal from textiles.

PREMIER has excellent solubility and emollient effect on cotton, poly, and poly/cotton fibers, accelerating the removal of a broad range of soils, stains, and calcium stearate accumulations (soap scum, grey down, redeposition, etc.).

The product rinses rapidly in medium- and low-temperature operations. It also reduces linting, which increases fabric life. As a result, greyed-down, dull, and stained linen can be rejuvenated and removed from out-of-service status.

Directions

Use PREMIER as a laundry detergent at the following rates:

Light soil: 1/4 – 1/2 pound per hundredweight (CWT)

Medium soil: 1/2 – 3/4 pound per CWT

Heavy soil: 1–2 pounds per CWT

In reclaim formulas, use the heavy soil dosage as a starting point, along with a separate bleach bath and appropriate rinsing and souring.

Packaging

PREMIER is available in 50-pound pails and 100- and 400-pound fiber kegs.
