

Technical Product Bulletin

REGENERATE

REGENERATE is a concentrated liquid water-conditioning product for all high-water-hardness situations.

Application

REGENERATE is formulated to remain stable over a wide temperature range (80°–180°F). REGENERATE will sequester water hardness up to 40 grains, thereby making detergents and bleaches more active while eliminating redistribution.

REGENERATE is a phosphate-based water conditioner that helps remove stearates and other hardness-related linen buildups.

Directions

Use 2–4 ounces CWT for every 5 grains of water hardness.

Packaging

REGENERATE is available in 4x1-gallon cases and 5-, 15-, and 55-gallon containers.
