

Technical Product Bulletin

RINSE LT

RINSE LT is an economical drying and rinse agent for low-temperature dish machine applications. It is dispensed automatically via injector to the final rinse line. The product reduces rinse water surface tension allowing for superior spot-free drying. Use RINSE LT safely on silver, flatware, china, glassware, and plastic.

Directions

RINSE LT is most effective when used in rinse water at 140°F. Lower temperatures will inhibit the activation of the drying agent. The rinse aid injector is set depending on conditions and desired results. Generally, 1–2 ounces of RINSE LT per 100 gallons of rinse water is ideal. Consult your local Pariser representative for specific use procedures.

Handling

RINSE LT is slightly acidic and may be mildly irritating. In case of contact with skin, rinse liberally with water. For eyes, continue flushing; if irritation persists, get medical attention.

RINSE LT should be stored at room temperature. Avoid freezing.

Packaging

RINSE LT is available in 4x1-gallon cases, 2.5-gallon totes, and 5-gallon containers.
