SILKY

SILKY aids the pre-spotting process as a silk spotter and a general leveling agent for moisture-sensitive fabrics. The product is safe and effective on a wide range of fabrics including silk, linen, gabardine, rayon, cotton, and wool.

Silk fabric is highly susceptible to issues during pre-spotting, and it requires great care and the right spotter to remove stains without damaging the fabric or removing the dyes. SILKY lubricates and emulsifies the oils and water in this process, allowing excellent stain removal without dye removal or troublesome residual rings.

Proper pre-spotting practice separates good cleaning operations from lesser ones. Using steam and other chemistry on the spotting board requires a leveling agent to allow proper residual removal in the subsequent cleaning process.

Benefits

- Excellent pre-spotter for silk and other fine fabrics.
- Can be safely applied to treated garments for re-cleaning.
- Leaves no residual ring or redeposition stains associated with wet-side spotting/re-cleaning procedures.
- Compatible in perc and hydrocarbon solvent systems.

Directions

Pre-spotting: Apply SILKY liberally to the stained area, tamp with a spotting brush, and clean.

Leveling: Treat the stained area with appropriate spotting agents, gently flush with water or steam if necessary. Apply SILKY to the treated area. Reclean the garment.

Packaging

SILKY is available in 4x1-gallon cases.
