

Technical Product Bulletin

SMART RINSE

SMART RINSE is a concentrated, high-temperature rinse and drying agent. It is best used when automatically dispensed via injector to the final rinse line. This product reduces rinse-water surface tension for spot-free drying on silver, flatware, china, glassware, and plastic. SMART RINSE has been certified by the EPA's Safer Choice program as an environmentally-preferred ware washing product.

Directions

SMART RINSE is effective when used in rinse water at 18–20 PSIG, and at temperatures ranging between 180°–185°F. Lower temperatures will inhibit activation of the drying agent while temperatures above 190°F will cause evaporation and clouding. Rinse aid injector is determined by conditions and desired results; however, 1–2 ounces of SMART RINSE per 100 gallons of rinse water works in general. Consult your local Pariser representative for specific usage procedures.

Handling

SMART RINSE is slightly alkaline and may be mildly irritating. In case of contact with skin, rinse liberally with water. For eyes, continue flushing; if irritation persists, get medical attention.

SMART RINSE should be stored at room temperature. Avoid freezing.

Packaging

SMART RINSE is available in 4x1-gallon cases and 5-gallon containers.
