

Technical Product Bulletin

TASKMASTER

TASKMASTER is an effective, multi-purpose stain remover, formulated for use in both perc and hydrocarbon solvents. TASKMASTER removes both dry-side and wet-side stains and is safe on most fabrics and skins, including silk, rayon, cotton, wool, acetate, linen, leather, and suede. TASKMASTER is your first choice on the spotting board. Use TASKMASTER for pre-spotting and post-spotting, as it can be dry cleaned without leaving a ring, or flushed out on the spotting board with steam and air-dried.

Directions

Always test fabric for colorfastness.

Pre-spotting silks: Pre-spot with TASKMASTER using a silk brush, and gently tamp the stained area to loosen stains. Dry-clean the garment, or gently flush with steam and feather dry, then clean.

Protein stains: Spot with TASKMASTER using a tamping brush or bone to loosen the stain, flush with steam, and feather dry. For set-in stains, add diluted ammonia and proceed as above.

Tannin stains: Spot with TASKMASTER using a tamping brush or bone to loosen the stain, flush with steam, and feather dry. For set-in stains, add acetic acid and proceed as above.

Dry-side stains: Spot with TASKMASTER using a tamping brush or bone to loosen stain, and dry-clean the garment.

Suede and leather: Use TASKMASTER directly on suede and leather as a pre-spotter to loosen ground-in soil. After pre-spotting, clean as you normally would any leather. TASKMASTER is safe on most dyes. Do not add moisture before cleaning.

Redisposition test: Apply several drops to garment. If redisposition is present, the redisposition will migrate to the outermost area.

Packaging

TASKMASTER is available in 4x1-gallon cases.
